

ATM GRUPA

EQUITY RESEARCH

In this analyst report, we maintain our Buy recommendation for ATM Grupa's shares. The reduction in valuation from PLN 5.04 (28.6% above the current market price) to PLN 4.95 per share is due to an adjustment of the value of the investment in the gaming industry. According to our latest financial projections, the company is currently trading at an adjusted EV/EBITDA multiple of approximately 5.2x for 2024 and 3.8x for 2025. In accordance with our model, it is anticipated that the total dividend payout in 2025 (two tranches) will amount to PLN 0.27 per share, indicating a dividend yield of approximately 7%.

We are preparing for the possibility that Q1 2025 could be a relatively low season for ATM Group on a full-year basis. We are projecting audiovisual revenues of PLN 56.8 million, representing a 2.6% year-on-year increase. Adj. EBITDA, according to our simulation, is forecast to reach PLN 10.4 million in Q1 2025, marking a 2.9% decrease year-on-year. After Q1 2025, LTM adj. EBITDA from audiovisual operations should amount to PLN 56.6 million (+8% y/y). Despite the assumption that we have no growth momentum, we are confident that adjusted EBITDA in H1 2025 will be strong. Our H1 2025 forecast projects adjusted EBITDA from audiovisual activities at PLN 25.9m, representing an increase from PLN 20.4m in H1 2024.

It is our assessment that ATM Group has continued to demonstrate the capacity to exhibit a positive growth trajectory in terms of adjusted EBITDA from audiovisual operations for the 2025-2026 period. Our forecast indicates that adjusted EBITDA from core operations in 2025-2026 will increase to PLN 66.9 million and PLN 69.3 million, respectively. We anticipate that a sustained material surpassing of the LTM ceiling of PLN 60 million in terms of adj. EBITDA (on audiovisual activities) will be reflected in the investment sentiment around ATM Grupa.

In the longer term, legislative changes may have a noticeable impact on the shape and condition of the film and television production industry, potentially strengthening Poland's competitive position against other countries in the CEE region. We acknowledge the PISF's commitment to promoting the necessity of enhancing the targeted subsidy for financing audiovisual production support. Furthermore, we would like to draw your attention to the fact that in March 2025 the first assumptions of the initiatives were presented in the Senate. Within the framework of the postulated changes, a particular emphasis was placed on tax relief solutions, which are already successfully operating in selected CEE countries (PISF indicates that this is a common model abroad for financial support of audiovisual productions). From our current perspective, we expect the legislative process to last until 2026. In such a scenario, a potentially new ecosystem for the film and TV production industry could start functioning from 2027.

The strengths and weaknesses of the valuation methods used in the report:

 $\ensuremath{\mathsf{DCF}}$ – the most popular and the most effective of the valuation methods - it is based on the discounting of future cash flows generated by the company. The disadvantage is the $high\ sensitivity\ to\ changes\ in\ the\ basic\ financial\ parameters\ for\ ecast\ in\ the\ model\ (interest$ rates, exchange rates, profits, residual value).

DDM - the method is based on discounting future cash flows from dividends. The advantage of the valuation is the inclusion of future financial results and cash flows from dividends. The main disadvantages are the high sensitivity to changes in the basic financial parameters forecasted in the model (capital cost, profits, residual value) and the risk of changing the dividend payment policy.

Comparative - the method is based on current and forecasted market multipliers of companies from the industry or related industries, which better than DCF shows the current market situation. The main disadvantages are the difficulty in choosing the right companies for comparison, the risk of ineffective valuation of companies compared at a given moment, as well as high volatility (along with price fluctuations).

Explanation of ratings:

Buy – we believe that the security will reach the target price in the recommended period, which significantly exceeds the current market price (at least + 15%);

Accumulate – we believe that the security will reach the target price in the recommended period, which exceeds the current market price (in the range of +5 to + 14.99%);

Hold – we believe that a security in the recommended period will fluctuate around the target price, which is close to the current market price (in the range from -4.99% to + 4.99%);

Reduce – we believe that the security will reach the target price in the recommended period, which is lower than the market price (range of decline from 5% to 14.99%);

Sell – we believe that a security in the recommended period will reach the target price, which is significantly lower than the market price (suggested erosion of the value exceeds 15%).

Target price - the theoretical price which, in our opinion, should reach a security in the recommended period; This price is the result of the company's value (eg based on DCF, comparative and other valuations), market conditions and the industry as well as other factors subjectively considered by the analyst.

Recommendations made by BDM are binding for 12 months from the issue date or until the target level is reached, unless they are updated during this period of time.

Opinions of an analyst and any recommendations included in this report neither constitute an investment, legal, accounting or tax advice or a statement that any investment strategy is adequate or appropriate because of individual circumstances concerning the customer, nor constitute personal recommendation.

The analysis is for information purposes only and does not constitute an advertisement or an offer or an invitation to subscribe or purchase financial instruments.

An investor should be aware that each investment decision in the capital market is subject to numerous risks that finally can result in a financial loss suffered by him. The return rate on individual investments can fluctuate depending on various factors beyond the control of the investor. Therefore, a customer who makes a single investment decision should not only check currency and correctness of individual assumptions made by the analyst in the report but also to have an independent assessment and own analysis (also based on scenarios other than the ones presented in the report) taking into consideration the level of acceptable risk. When deciding on activity on the capital market the Investor should take into consideration the fact that the investment portfolio structure (diversification of investment through possessing more than one financial instrument) can reduce risk exposure to an individual instrument bringing a negative rate of return in a given period. At the same time, however, it can lead to limitation of a positive rate of return the investor could achieve in the case of a single financial instrument in a given time period. The investor should be aware that the investment portfolio structure and any investment strategy for the stock market do not guarantee the achi ent of a positive rate of return and do not protect him against final loss.

For the first time this report has been made available to the public on 2025-04-25 (18:03 CET/CEST). Date of preparing the report is the date of making it accessible. Before the recommendation was made accessible, information included in it had been confidential.

The prices of the financial instruments listed in the document have been taken from the real-time pricing as provided by Bloomberg. Data concerning financial instrument prices used in the report could
